Professional Summary

Final-year Computer Science and Engineering student with hands-on full-stack development experience across Java, Python, and JavaScript ecosystems, including the MERN stack (MongoDB, Express, React, Node.js). Skilled in Object-Oriented Programming, REST API design, and building scalable, production-ready applications end to end. Strong foundation in data structures, algorithms, and problem solving, with proven ability to collaborate in team settings and adapt quickly across technology stacks. Seeking to contribute as a Software Engineer, bringing versatility across web development and a track record of learning new stacks fast.

Technical Skills

Languages: Java, Python, JavaScript, SQL

Frameworks & Libraries: Spring Boot, React, Node.js

Databases: PostgreSQL, MongoDB

Core Concepts: Object-Oriented Programming (OOP), Data Structures, REST APIs, API Integration, Software Development Lifecycle (SDLC), Debugging, Problem Solving, Performance Optimization, Clean Code

Tools & Practices: Git, GitHub, Docker, Maven, Agile, Code Reviews, Team Collaboration

Experience

AI & Deep Learning Intern — RunShaw Technologies Pvt. Ltd.

- Developed NLP and Deep Learning applications, building end-to-end text preprocessing and model training pipelines using Python, TensorFlow, and Keras.
- Applied core NLP libraries and techniques to prepare and structure unstructured text data for model consumption, strengthening Python programming and debugging skills.
- Tested and evaluated model performance through iterative experimentation, and collaborated closely with mentors in an Agile-style workflow, documenting implementation details for team-wide clarity.

Projects

Multi-Tenant SaaS Management Platform

Java, Spring Boot, React, PostgreSQL, JWT, Docker

- Architected and built a multi-tenant SaaS platform with a clean, layered backend architecture using Java and Spring Boot, exposing RESTful APIs for core CRUD operations.
- Implemented secure authentication and authorization using JWT, enforcing role-based access control across tenant boundaries.
- Designed a normalized PostgreSQL database schema to support multi-tenant data isolation and reliable query performance.
- Built a responsive React frontend integrated with backend REST APIs, enabling seamless end-to-end functionality.
- Containerized the application with Docker for consistent deployment and used Git for version control throughout development.

CollegeERP

MERN Stack, JWT, RBAC, MongoDB

- Architected backend data models and a REST API layer of 15+ endpoints across 12+ modules, implementing authentication middleware and session management for admin, faculty, and student roles.
- Collaborated with a team to debug and deploy the system end-to-end, coordinating on integration points between frontend and backend components.

Achievements

- Secured 1st Runner-Up at the Fin-A-Thon Hackathon.
- Best Student Award — ISTE PESCE chapter recognition for leadership and technical contribution.

Education

Bachelor of Engineering in Computer Science and Engineering

Graduated: 2026

P.E.S. College of Engineering, Mandya
